# Acridid Notes

Collection No. 48
J.H. Calaby
11-22/11/53.
W.A.

Collecting site 1.

= Nancy Cove, Rottnest Island (11-Nov.-'53.)

3 wasps, 2 flies, 2 cockroaches, 12 Acridids.

from vegetation on coast dunes. Mostly low sclerophyll shrubs, some of them prostrate.

Collecting site 2. (down near Cape Leeuwin)

2 ♀♀ Coryphistes. Hamelin Bay. / Collected by R.W. George
(14-16/Nov/'53) [These specimens have been dried from alcohol.]

collecting site 3.

41 miles N.E. Wubin. (15/Nov/'53.)
N.E. Milward

4 cockroaches. Collected by ~~N. Milward.~~

Collecting site 4. 24817

22/Nov/'53.

=

46 Acridoids, 3 wasps, 4 flies.
Moraba consobrina, Cedarinia sp., Coryphistes sp., Tonaca sp.,
A sort of scraggy dry sclerophyll forest. Canopy almost all
Pharkacrotum sp. n2, Acacia brunea, Urtica rugosa,
Jarrah and Banksia a very occasional Marri. Fairly
Exarna includens, Azilosa sp.
dense sclerophyll shrub stratum with much Xanthorhoea,
light very Sandy soil.
|| Returned to Perth ||

[See Calaby's letter of 25/11/53]

Collecting site 5. 24822.

=

22/Nov/53.

24 Acridids.

Compsistes sp., Gonaia sp., Phaulacridium sp.n., Peakesia

Somewhat similar in general composition to site 4, except that canopy

brunnea

was entirely Tuart, the shrub understratum was much different quantitatively (i.e. proportions of varius components very different) and there were larger open areas with dried grass.

Tuart Hill = 24824.
